Standards of competence and experience are mandated and listed in Table No. 01 (for bidders who are Non-manufacturers of goods within the scope of the bid package) or Table No. 02 (for bidders who are manufacturers of goods within the scope of the bid package). A

bidder's evaluation of competence and experience is subjected to whether it meets all standards. A subcontractor's competence and experience will not be taken into consideration when evaluating a bid proposal. The contractor itself must meet the evaluation standards of competence and experience.

In case the currency used in similar contracts or one of the following - Investor's payment confirmation for past contracts for the supply of goods, tax declarations, documents proving the bidder's competence and experience - is not VND: in the bid proposal, the bidder must convert them to VND as a basis for evaluation. The conversion is subject to the exchange rate of Vietcombank's selling rate at the date of signing a similar contract.

In case the currency used in similar contracts or one of the following – Investor's payment confirmation for past contracts for the supply of goods, tax declarations, documents proving the bidder's competence and experience – is not VND: in the bid proposal, the bidder must convert them to VND as a basis for evaluation. The conversion is subject to the exchange rate of [selling rate of Vietcombank] at the date of signing a similar contract.

In case the Bidder participating in bidding is the parent company (for example, Corporation) assigning a subsidiary to perform part of the work in the bid package, the contractor must declare specifically which part using Form No. 11C Chapter IV. The evaluation of experience in fulfilling similar contracts is based on the value and volume of work that the parent company and subsidiary delivered in the bidding package.

For Consortium, capacity and experience will be defined by the aggregated capacity and experience of each member of Consortium, but it must be assured that each member of Consortium must satisfy the requirement of capacity and experience for the volume of work implemented by him; if any of the members in Consortium do not satisfy the capacity and experience criteria, the Consortium will be evaluated as fail to meet the requirement on capacity and experience.

Sub-contractors' capacity and experience will not be considered in the evaluation of the Bid proposal of main Bidder (unless the Invitation to Bid allows to use specialized sub-contractor). The main bidders themselves must satisfy criteria on capacity and experience (not considered the sub-contractors' capacity and experience).

In case application of pre-qualification, if there are changes in capacity and experience when submitting the bid proposal in comparison with the information in the evaluated pre-qualification documents, the bidders must update their capacity and experience; in case there is no change in bidders' capacity and experience, the bidders must send a written commitment that they still satisfy the bidding package's requirements.

If there is no pre-qualification, the evaluation of capacity and experience will be carried out in accordance with the following evaluation criteria, the bidders are considered "pass" the capacity and experience requirements if they satisfy all the criteria.

2.1 Criteria for evaluation of capacity and experience

2.2 Evaluation Criteria for Key personnel (*Not applicable*)

2.3 Sub-contractors and Specialized Sub-contractors (*Not applicable*)

Section 3: Technical evaluation criteria (see Part 2 – Chapter V)

Section 4: Price evaluation criteria (Lowest price method)

Determination of lowest price as following steps:

- Step 1: Determination of bidding price not including all taxes, fees, charges (if any) arisen inside Vietnam;
- Step 2: Rectification of errors (apply in accordance with Note (1));
- Step 3: Adjustment of deviations (apply in accordance with Note (2));
- Step 4: Determination of bidding price after rectification of errors, adjustment of deviations, discount deduction (if any);
- Step 5: Conversion of bidding price into a single currency (if any);
- Step 6: Determination of preferential treatment value (if any) as stipulated in ITB 28;
- Step 7: Ranking the bidders: the Bid proposal which has the **lowest bidding price for each group** excluding all taxes, fees, charges (if any) and Related Services including all taxes, fees, charges (if any) for each group after rectification of errors, adjustment of deviations, discount deduction (if any), conversion of bidding price into a single currency, addition preferential treatment value (if any), shall be ranked the first.

The following content will be considered in the evaluation and ranking stage of contractors:

During the Bid evaluation stage, for proposal of goods originating from countries affected by armed conflict, in state of war, sanctioned or embargoed, and the importation of those may be interrupted and affect the contract performance and delivery schedule, Bidder must provide explanations and commitments on the ability to deliver goods for Vietsovpetro to consider and evaluate.

Based on the actual situation at that time, Vietsovpetro has the sole and exclusive right to review and decide to reject the bids, or not to continue the evaluation, if in the opinion of Vietsovpetro there is any risk to the contract performance and delivery schedule. In that case, the Vietsovpetro at its sole and absolute discretion will have the right to consider and remove these Bidders from the ranking list.

Notes:

(1) Rectification of errors

Provided that the bid proposal substantially satisfies Invitation to Bid, Vietsovpetro shall rectify arithmetical errors and other errors on the following basis:

a) Arithmetical errors include mistakes from calculation such as: addition, subtraction, multiplication, division when calculating bidding price. If there is a discrepancy between the unit price and the total price, the unit price shall prevail and the total price shall be corrected; If there is unusual differences in unit price due to decimal errors (10 times, 100 times, 1000 times), the total price should be used as a legal basis for correction; when the bidder fills without price or “0” in the column of unit price and total price, price of this item shall be deemed to be allocated among the prices for the other items of work of the package and Bidder will not be paid for by Vietsovpetro during contract performance.

b) Other errors:

- If the Total price column is filled without the corresponding unit price, the unit price shall be determined by dividing the total price by the quantity; if the unit price is filled in, but the total price is missing, the total price shall be determined by multiplying the quantity by the unit price; if one of the items has the unit price and total price filled in, but the quantity is missing, the quantity shall be determined by dividing the total price by the unit price of that particular item. In case the aforesaid quantity that has been additionally defined is different from the quantity mentioned in the Invitation to

Bid, that value difference is the deviation in the scope of supply, which shall be adjusted under regulations specified in Step 3;

- Mistake in Unit must be corrected to meet the requirements specified in the Invitation to Bid;
- Mistakes in using comas (instead of periods) and vice versa shall also be corrected in accordance with the written in Vietnamese customary. If Vietsovpetro determines the obvious mistake in placing of comas and periods, the total price shall prevail and the unit price shall be corrected.
- If there is an error in a total corresponding to the addition of subtotals, the subtotals shall prevail and the total shall be corrected;
- If there is a discrepancy between words and numbers, the amount in words shall used as a legal basis for correction. If the amount expressed in words is incorrect, then the number after rectification of error as stipulated in this article should be used as a legal basis for correction.

(2) Adjustment of deviation

a) In case of deviation in the scope of supply compared to the Invitation to Bid, what is deficient shall be added, and what is redundant shall be subtracted according to respective unit price in the Bid proposal of bidder that has deviation;

In case of deficient deviation (lack of items of work in comparison with the scope of supply), if there is no respective unit price in the Bid proposal with deficient deviation, the adjustment of deviation will be as follows:

The highest unit price offered for such item of Bid proposals which pass the Technical evaluation shall be used as legal basis for adjustment of deviation. In case the Bid proposals passed the Technical evaluation has no unit price, unit price in the value of bidding package shall be used as legal basis for adjustment of deviation. In case not having value of bidding package, unit price for calculating price of bidding package shall be used as legal basis for adjustment of deviation.

In case only one bidder passes the Technical evaluation, adjustment of deviation shall be made based on respective unit price in the Bid proposal of this bidder; In case this Bid proposal has no respective unit price, unit price in value of bidding package shall be used. In case not having value of bidding package, unit price for calculating price of the bidding package shall be used as legal basis for adjustment of deviation.

b) In case bidder has discount letter, rectification of errors and adjustment of deviation shall be made based on bidding price without discount. Percentage (%) of deficient deviation shall be determined on basis of comparison of bidding price in Application for Bidding.

Section 5: Technical alternative

Bidder is allowed to submit Technical alternative and requested to identify clearly which is “**The Main offer**” and which is “**The alternative offer**” in the Proposal.

Note: Technical alternatives are only considered when main solution meets requirements and bidder is ranked first. In this case, bidder shall provide all information necessary for evaluation of the alternatives by Vietsovpetro, including notes, drawings, technical specifications, progress of supply and other relevant information.

Section 6: Bidding package with multiple independent parts

If the bidding package is divided into multiple independent parts as stipulated in ITB 1.2, implement as follows:

1. The evaluation and approval of the winning of bid will be carried out on the basis that the total proposed bid winning prices of the bidding package are lowest (for lowest price method); the total evaluated prices are lowest (for evaluated price method); the total proposed bid winning prices shall not exceed the approved value of bidding package but are not compared to the estimated value of each part.
2. There is one contract if only one bidder wins all the parts of the bidding package. There are many contracts if many bidders win the different parts of the bidding package.

Section 7: The right to unilaterally terminate contract negotiations with the first-ranked contractor in in contract negotiation satge.

Based on the actual situation at that time, Vietsovpetro will have the sole and exclusive right to review and decide to reject the proposals of those goods, or not to continue the evaluation, if in the opinion of Vietsovpetro there is any risk to the contract performance and delivery schedule. In that case, Vietsovpetro at its sole and absolute discretion will have the right to stop contract negotiation, and the next ranked bidder will be invited to negotiate the contract.

-

3. GENERAL REQUIREMENTS

3.1. The operational characteristics of downhole equipment and their dimensions must meet the application requirements in item 2. The manufacturer clarifies the general information about devices. The information includes:

- Specification;
- Operation;
- Working pressure;
- Test pressure;
- Temperature and pressure rate;
- Tensile strength;
- Material;
- Standard;
- Certificates of quality are issued by inspection companies,
- Guarantee;
- Date of manufacture and origination;
- Delivery time.
- The suppliers must dedicate Part Number, Model, and Technical Data

Sheet.

3.2. Downhole completion equipment should provide

- Closing the well hole in case of non-hermetic sealing of the wellhead;
- Realization of the well test by wireline downhole devices;
- Successful kick-off and operation of flowing and then gas lift wells or water injection;
- Realization of downhole workover repairs by the standard wireline, without pulling tubing string;
- Compensation of length changes due to the thermal expansion of tubing, tubing weight, and differential pressure.
- Pull almost downhole equipment and line parts above the packer with one trip without running additional retrievable tools and preliminary kick-off of the well;
- Translation of well after ending the flowing period to gas lift operation, without replacement essential downhole equipment;
- Allow injecting fluid (chemical or gas) from the annulus into tubing via sliding sleeves or in-side mandrel valves for well flush, chemical treatment, well kick-off, or well kill if it is required without any additional work (with an exception for open/close sliding sleeves by wireline).
- Automatically start gas lift operation,
- Kick-off, treatment, and translation well under water injection without replacement essential downhole equipment,
- Realization of a complex of downhole operations by standard wireline
- Realization of struggle with asphaltene-resin-paraffin sediments.

3.3. The inside diameter of the downhole should be closest to an inside tubing diameter.

3.4. The outside diameter of the nipples of the Tubing Retrievable Surface Controlled Subsurface Safety Valve (Tubing SCSSV) with a control line of the mandrels, packers, etc., should be less than 4 mm inside diameter of the production casing.

3.5. Thread of elements of downhole equipment and tubing string should be identical for a type and provide a necessary reserve strong at stretching loadings arising

from own weight of a tubing string, efforts at pull out of packer and additional effects, arising during pressurizing and setting the packer. The connection of downhole equipments shall be TMK UP PF thread connections.

3.6. The suppliers are required to provide the following information for every component in their proposals: Part Number, Model, Technical Data Sheet (Specified as Item 3.1 of this technical requirement).

3.7. **Year of manufacture:** All goods must be brand new and unused, manufactured in 2025 year or later.

3.8. **Guarantee period of the equipments:** The guarantee period of the equipment is 12 months from the date of putting the equipment into operation but at least 18 months from the date of delivery of the last part of the equipment.

4. CODES AND STANDARDS

The downhole equipment manufacturer/supplier must have an auditable quality control system that meets ISO 9000 or higher endorsement standards. The supplier must provide a copy of the QA/QC certificate for any downhole equipment supplied at the request of VSP. - The chemical injection valves are used to control the injection of chemicals or treatment of harmful deposits and corrosion in tubing and around downhole tools. These valves are installed/retrieved in the chemical injection side pocket mandrels using a kickover tool and standard wireline/slickline method. The valve's injection rate is controlled by the size of the port, the tension adjustment of the internal power spring before installation, and the pump-in rate. The valves are in a normally closed position due to the combined force of preset spring tension and the tubing pressure on the valve stem. A chemical pump at the surface injects chemicals down the casing annulus or through a separate injection line attached to the mandrel. From the casing annulus or injection line, the chemical enters the injection valve port. The valve opens when the chemical injection pressure (the surface chemical pump pressure plus the hydrostatic pressure of the chemical) exceeds the spring force and tubing pressure, allowing chemicals to flow into the tubing string. An integral reverse-flow check valve prevents backflow into the casing annulus or injection line.
